

## Oral toxicity prediction results for input compound

Predicted LD50: 1000mg/kg

Predicted Toxicity Class: 4

Average similarity: 56.86%

Prediction accuracy: 67.38%

|                                           |                                    |
|-------------------------------------------|------------------------------------|
| Name                                      | N#Cc1cccc(CC(=O)NC[C@H]1CCCCC1)C#N |
| Molweight                                 | 298.38                             |
| Number of hydrogen bond acceptors         | 4                                  |
| Number of hydrogen bond donors            | 1                                  |
| Number of atoms                           | 22                                 |
| Number of bonds                           | 24                                 |
| Number of rotatable bonds                 | 5                                  |
| Molecular refractivity                    | 84.09                              |
| Topological Polar Surface Area            | 62.12                              |
| octanol/water partition coefficient(logP) | 2.96                               |
