

## Oral toxicity prediction results for input compound

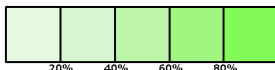

Predicted LD50: 1600mg/kg

Predicted Toxicity Class: 4

Average similarity: 51.7%

Prediction accuracy: 67.38%

|                                           |                            |
|-------------------------------------------|----------------------------|
| Name                                      | N#Cc1ccc(CNC(=O)Cc2ccccc2) |
| Molweight                                 | 291.35                     |
| Number of hydrogen bond acceptors         | 4                          |
| Number of hydrogen bond donors            | 1                          |
| Number of atoms                           | 22                         |
| Number of bonds                           | 24                         |
| Number of rotatable bonds                 | 5                          |
| Molecular refractivity                    | 83.65                      |
| Topological Polar Surface Area            | 65.78                      |
| octanol/water partition coefficient(logP) | 2.69                       |
